

Knowledge on Demand

The 405(d) Program, in collaboration with industry, has launched a new cybersecurity training platform on its website—405d.hhs.gov—titled Knowledge on Demand. This new cybersecurity education platform will include multiple delivery methodologies to reach the varied size health care facilities across the country. The platform will include five cybersecurity awareness trainings that align with the top five cybersecurity threats

outlined in the landmark 405(d) publication: *The Health Industry Cybersecurity Practices: Managing Threats and Protecting Patients (HICP)* and its accompanying two volumes.

Why is this so exciting? These are FREE resources, readily available for download directly to your workstation. And because they are built from the HICP publication, you can be certain of the content, accuracy, and relevancy to your organization's cybersecurity needs.

The delivery methodologies for Knowledge on Demand include:

Job Aids

These are single documents with key tips related to the topic. This format is meant to be used as an “on-the-job” resource tool. They can provide instructional steps if necessary to meet the training objectives.

Key Benefits: Job aids are useful since an employee can reference one throughout the day-to-day operations. They can also act as reminders about topics covered in more formal trainings.

Learning Management System (LMS) File

Content intended for an LMS will be similar in look and experience as the previously discussed Interactive Training video. Content will be exported and saved to a file type compatible for import to an organization's LMS platform.

Key Benefits: This delivery method will allow larger organizations that already have an LMS platform and want to add our content directly to their system. This will be especially useful if they do not already have cybersecurity training courses.

Interactive Training Videos

These videos are launched from the 405(d) KOD webpage but can also be downloaded by the end user. They include recorded audio to take the trainee through the video along with interactive content to include knowledge checks and animations.

Key Benefits: This interactive delivery method provides end users flexibility to access each threat topic at their own time due to the easy of access from the website.

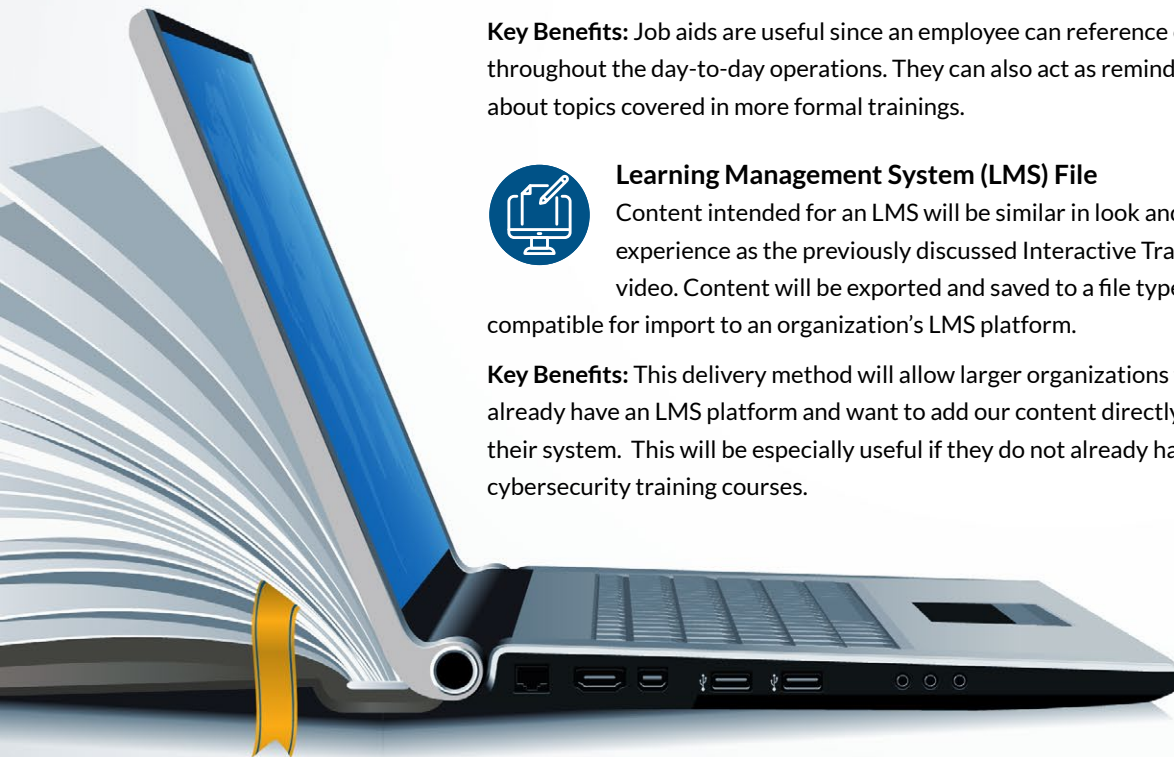

PowerPoint Trainings

These can be leveraged for in person or on-site presentations. These will include facilitator notes with slide specific content and knowledge checks to reinforce learning. Such presentations can be delivered in presentation mode or in a “Lunch n Learn” format at your location.

Key Benefits: PowerPoint presentations are useful tools because they encourage discussion between employees and managers. It also allows the organization to better tailor their training to meet their specific needs.

Visit our website at <https://405d.hhs.gov/knowledgeondemand> to experience this new learning platform and explore the ways you can integrate this platform into the awareness education for all employees at your healthcare organization.
